

STEREO MOC Status Report  
Time Period: 2008:161 - 2008:167

STEREO Ahead (STA) Status:

1. The following Ground System anomalies occurred during this reporting period:

- None.

2. Ahead spacecraft performance continues to be very good with all subsystems performing nominally. The following spacecraft/instrument events occurred during this week:

- The average daily SSR playback volume for Ahead was 7.1 Gbits during this week.

STEREO Behind (STB) Status:

1. The following Ground System anomalies occurred during this reporting period:

- On day 163, DSS 26 transmitter tripped off-line at 0022Z resulting in approximately 14 minute SECCHI data gap on day 162. To avoid additional SSR data loss, MOT opted to not re-establish the uplink. As a result, commanding and tracking data were not available for most of the track. See DR# G108657 for more information.

2. Behind spacecraft performance continues to be very good with all subsystems performing nominally. The following spacecraft/instrument events occurred during this week:

- The average daily SSR playback volume for Behind was 7.5 Gbits during this week.
